

HD 2156.1, HD 2156.2 pH METER - CONDUCTIVITY METER - THERMOMETER

The **HD2156.1** and **HD2156.2** are portable instruments with a large LCD display. They measure pH, mV, redox potential (ORP), conductivity, liquid resistivity, total dissolved solids (TDS) and salinity using combined 4-ring and 2-ring conductivity/temperature probes. Temperature only is measured by Pt100 or Pt1000 immersion, penetration or contact probes.

The pH electrode calibration, as well as manual, can be carried out on one, two or three points and the calibration sequence can be chosen from a list of 13 buffers.

The probe calibration can be performed automatically in one or more of the 147μ S, 1413μ S, 12880μ S or 111800μ S/cm conductivity calibration solutions.

The HD2156.2 instrument is a **datalogger.** It memorizes up to 20,000 sets of three measurements composed of pH or mV, conductivity or resistivity or TDS or salinity and temperature: these data can be transferred to a PC from the instrument connected via the multi-standard RS232C serial port and USB 2.0. The storing interval, printing, and baud rate can be configured using the menu.

The HD2156.1 and HD2156.2 models are fitted with an RS232C serial port and can transfer the acquired measurements to a PC or to a portable printer in real time.

The *Max, Min* and *Avg* function calculates the maximum, minimum or average values. Other functions include: the Auto-HOLD function and the automatic turning off which can also be excluded.

The instruments have IP67 protection degree.
